

The sun protect product line combines natural sun protection with intensive moisturising care.

The 100 % mineral filters immediately protect against UVA and UVB rays, are free from nanoparticles and coral-friendly. Ectoin protects the DNA of the skin cells and, combined with carrot extract, neutralises free radicals. Pure aloe vera juice, which is the main component of the formulations, has an intensive moisturising effect, while high-quality oils have a caring effect. The light, water-resistant textures absorb quickly.

After sunbathing, the after sun care pampers the skin with a pleasant cooling effect, soothes skin irritations and has a regenerating effect.

SANTAVERDE
NATURAL SKIN CARE

sun protect
Mineral sun care
with active DNA protection

The sun protect product line

sun protect cream SPF 20 & lotion SPF 15

- with active DNA protection and antioxidants
- with 100 % mineral filters without nanoparticles
- immediate protection against UVA and UVB rays
- provide intensive moisture
- maintain skin's elasticity
- absorb quickly
- water-resistant
- coral-friendly

after sun recovery lotion

- cools and regenerates sun-stressed skin
- provides intensive moisture
- supports the skin's own DNA repair
- soothes skin irritations
- strengthens skin's elasticity

Sun protection factors and protective effects

The SPF multiplied by the self-protection time indicates the length of the potential stay in the sun without getting a sunburn: self-protection time x SPF = maximum time in the sun. With a SPF 30 you could stay in the sun twice as long as with SPF 15: The protection effect with a SPF 15 is already 93.3 %, increases to 95 % with SPF 20 and at SPF 30 to 96.7 %. This means that the protective effect at higher factors no longer increases significantly, only the protection period is extended. A 100 % light protection is however not reachable.

The active ingredients of the product line sun protect

Protection of the skin DNA

Ectoin

actively protects the DNA of skin cells, has a repairing effect and protects the skin from environmental influences.
contained in sun protect cream and lotion

Carrot extract

neutralises skin-damaging free radicals through beta-carotene and accelerates skin tanning.
contained in all products of the line

Apple extract

protects the skin from oxidative stress through polyphenols and has a strengthening effect.
contained in sun protect cream

Sea buckthorn extract

has an antioxidant effect through flavonoids and supports the skin's own DNA repair.
contained in after sun recovery lotion

Moisture and regeneration

Aloe vera juice

from our own cultivation has an intensive moisturising, regenerating, cooling and calming effect due to the high content of Aloeverose.
contained in all products of the line

Hyaluronic acid

has a hydrating effect, regulates the moisture balance, promotes skin's elasticity and protects the skin's barrier.
contained in sun protect cream

Meadowsweet extract

promotes the skin's regeneration and has an anti-inflammatory effect.
contained in after sun recovery lotion

Care and strengthening of the skin elasticity

Coconut oil

has an intensive caring, cooling and restorative effect.
contained in all products of the line

Joboba oil

protects against loss of moisture and increases skin elasticity.
contained in all products of the line

Shea butter

makes the skin supple and has a caring effect.
contained in all products of the line

Almond oil

prevents the skin from drying out, nourishes and regenerates.
contained in after sun recovery lotion
